- 16. Appendix

1. Executive Summary

The SPPG Dashboard is a single system for managing, monitoring, and publishing information about the *Makan Bergizi Gratis* (MBG) free-meal program. Right now every SPPG kitchen (*Satuan Pelayanan Pemenuhan Gizi*) keeps its own spreadsheets. Nobody can see the whole program at once, and pulling a single number means chasing files across kitchens. This platform puts every kitchen's operational, nutrition, and finance data in one place.

One decision shapes the whole build. **data is cleaned by Claude in a desktop app before it ever reaches the website.** That keeps the cost of AI out of the product. One admin cleans the file, a second admin checks it by hand, and only then does it get uploaded. By the time data reaches the website it is already structured and verified.

2. Background & Problem Statement

<<Complete this section>>

2.1 Current Situation

The Makan Bergizi Gratis (MBG) program operates through a growing network of SPPG (Satuan Pelayanan Pemenuhan Gizi) kitchens across Indonesia. Each SPPG kitchen records operational, nutritional, financial, and geographical data to support its daily activities and reporting requirements.

Currently, each SPPG kitchen maintains its own spreadsheet to record and manage this information. While this approach enables individual kitchens to manage their own data, it results in information being stored separately across multiple files, making it difficult to consolidate, analyze, and monitor the overall performance of the MBG program.

2.2 Problem Statement

Managing data through separate spreadsheets across multiple SPPG kitchens creates several operational challenges, including:

- No centralized repository for SPPG data.
- Difficulty consolidating information from multiple kitchens into a single view.
- Limited visibility into overall operational performance across all SPPG kitchens.
- Difficulty tracking key indicators such as meal distribution, nutritional information, financial expenditure, and geographical coverage.
- Time-consuming manual processes for collecting, validating, and reporting data.
- Increased risk of inconsistent data, duplicate records, and human error.
- Limited ability to generate timely reports and support data-driven decision-making.
- Poor scalability as the number of participating SPPG kitchens continues to increase.

As the MBG program expands, these challenges make it increasingly difficult to efficiently monitor operations, measure program impact, and provide transparent information to stakeholders.

2.3 Product Opportunity

The SPPG Dashboard addresses these challenges by providing a centralized digital platform that consolidates data from all SPPG kitchens into a single system. Through AI-assisted data processing, an integrated back-office system, content management capabilities, and interactive internal and public dashboards, the platform standardizes data management and provides a single source of truth for the MBG program.

By replacing fragmented spreadsheet-based reporting with a scalable digital solution, the SPPG Dashboard enables real-time monitoring, improves data quality, supports informed decision-making, and enhances transparency for both internal stakeholders and the public.

3. Product Vision

The SPPG Dashboard aims to become the central digital platform for managing, monitoring, and reporting the operational performance of the Makan Bergizi Gratis (MBG) program. By consolidating data from SPPG kitchens into a single, reliable system, the platform seeks to improve operational visibility, enhance transparency, and support data-driven decision-making at all levels of the program.

The product is designed to provide stakeholders with timely, accurate, and accessible information while reducing manual processes and ensuring data consistency. As the MBG program expands, the platform will continue to evolve to support additional operational capabilities, system integrations, and reporting requirements.

3.1 Vision Statement

To establish a centralized, scalable, and reliable digital platform that serves as the single source of truth for the Makan Bergizi Gratis (MBG) program, enabling efficient operations, informed decision-making, and transparent reporting across all SPPG kitchens.

3.2 Product Objectives

To establish a centralized, scalable, and reliable digital platform that serves as the single source of truth for the Makan Bergizi Gratis (MBG) program, enabling efficient operations, informed decision-making, and transparent reporting across all SPPG kitchens.

4. Product Goals

The SPPG Dashboard is designed to support the successful implementation and long-term sustainability of the MBG program by improving operational efficiency, strengthening data management, and enhancing transparency. The product goals are categorized into business, operational, and user-focused goals.

4.1 Business Goals

The business goals of the SPPG Dashboard are to:

- Establish a centralized platform for managing MBG program data across all SPPG kitchens.
- Improve transparency and accountability by providing reliable information to both internal stakeholders and the public.
- Enable data-driven planning, monitoring, and strategic decision-making through consolidated reporting and analytics.
- Support the continued growth and scalability of the MBG program through a standardized digital platform.

4.2 Operational Goals

The operational goals of the SPPG Dashboard are to:

- Standardize the collection, validation, and management of operational data across all SPPG kitchens.
- Reduce manual effort required for data consolidation and report preparation.
- Improve the accuracy, consistency, and completeness of operational data.
- Enable faster access to operational insights through centralized dashboards and reporting.
- Streamline the workflow from data submission to dashboard publication.

4.3 User Goals

The SPPG Dashboard aims to help users:

- Easily upload, validate, and manage operational data through an intuitive back-office interface.
- Access timely and accurate information relevant to their roles and responsibilities.
- Monitor operational performance through interactive dashboards and visual reports.
- Reduce the time required to prepare, review, and retrieve information.

- Increase confidence in the accuracy and reliability of the data used for decision-making.

5. Users & Roles

The SPPG Dashboard is designed to support multiple user groups, each with different responsibilities and access levels. Role-based access control ensures that users can only view and perform actions relevant to their responsibilities while maintaining data security and integrity.

5.1 Primary Users

User Role	Description	Responsibilities
Data Admin	Responsible for managing operational data submitted by SPPG kitchens.	Upload raw data, review AI-processed data, validate information, import approved data into the system.
CMS Admin	Responsible for managing public-facing content displayed on the dashboard.	Create, edit, publish, and manage website content, announcements, gallery images, and supporting documents.
Internal User	Authorized MBG stakeholders who monitor program performance.	View operational dashboards, analyze reports, monitor KPIs, and access internal program data.
Public User	Members of the public accessing publicly available information.	View public dashboard information, including SPPG locations, menu information, nutrition details, and program updates.

5.2 User Permissions

Function	Data Admin	CMS Admin	Internal User	Public User
Login	✓	✓	✓	—
Upload Operational	✓	—	—	—

Data				
Review AI processed Data	✓	—	—	—
Validate & Import Data	✓	—	—	—
Manage Website Content	—	✓	—	—
Manage Gallery & Documents	—	✓	—	—
View Internal Dashboard	✓	✓	✓	—
View Public Dashboard	✓	✓	✓	✓
Download Reports	✓	✓	✓	—

<<Add content here>>

6. Product Scope

The SPPG Dashboard provides a centralized platform for managing, processing, and visualizing operational data from SPPG kitchens. The initial scope focuses on establishing the core capabilities required for standardized data management, operational monitoring, and public transparency.

6.1 Phase 1 Scope

The current implementation of the SPPG Dashboard includes the following core modules:

- Centralized back-office for operational data management.
- AI-assisted processing and structuring of uploaded data.
- Data validation and approval workflow.
- Internal dashboard for operational monitoring and reporting.
- Public dashboard for transparency and public information.
- Content Management System (CMS) for managing public-facing content.
- User authentication and role-based access control.
- Centralized database for storing operational, nutritional, financial, and geographical information.

6.2 Features Included

Data Management

- Upload raw operational Excel files.
- AI-assisted data parsing and processing.
- Preview processed data before import.
- Validate and approve processed data.
- Import validated data into the central database.

Dashboard

- Internal operational dashboard.
- Public information dashboard.
- Data visualization and reporting.
- Search and filtering capabilities.

Content Management

- Manage website content.
- Manage gallery images.
- Manage supporting documents.

- Publish updates to the public dashboard.

User Management

- Secure login.
- Role-based user access.
- Permission management.

6.3 Features Excluded

The following features are not included within the current scope of the product:

- Supply chain and inventory management.
- CCTV monitoring and live video integration.
- Attendance management.
- Financial Profit & Loss (P&L) management.
- Integration with external third-party systems.
- Mobile application support.
- Predictive analytics and advanced reporting.
- Automated notifications and workflow automation.

7. User Journey

This section outlines the primary user workflows supported by the SPPG Dashboard. The user journeys illustrate how different user roles interact with the system to manage operational data, publish content, and access dashboard information. Detailed process flows are provided in the accompanying user journey diagrams.

7.1 Data Admin Journey

Objective

The Data Admin is responsible for managing operational data submitted by SPPG kitchens. This workflow ensures that raw data is uploaded, processed, validated, and stored in the central database before being made available through the dashboards.

User Journey

1. Login to the Backoffice System.
2. Navigate to the Data Management module.
3. Upload raw operational Excel files.
4. AI processes and structures the uploaded data.
5. Review and validate the processed data.
6. Edit or reprocess data if required.
7. Approve and import validated data into the database.
8. Updated information becomes available on the Internal and Public Dashboards.

7.2 CMS Admin Journey

Objective

The CMS Admin manages public-facing content displayed on the SPPG Dashboard, ensuring that information remains accurate, relevant, and up to date.

User Journey

1. Login to the Backoffice System.
2. Navigate to the CMS module.
3. Create, edit, or delete content.
4. Upload supporting documents or gallery images.
5. Preview changes.

6. Publish approved content.
7. Updated content is displayed on the Public Dashboard.

7.3 Public User Journey

Objective

The Public User accesses publicly available information through the dashboard without requiring authentication. The dashboard provides transparent information about the MBG program and SPPG operations.

User Journey

1. Access the Public Dashboard.
2. Browse available dashboard sections.
3. View operational, nutritional, and geographical information.
4. Search or filter information where applicable.
5. View documents, announcements, and gallery content.

8. Functional Requirements

This section defines the functional capabilities of the SPPG Dashboard. The requirements describe the expected system behavior and features that enable users to perform their respective tasks efficiently and securely.

8.1 Authentication

Objective

Provide secure access to the SPPG Dashboard by ensuring that only authorized users can access system functionalities based on their assigned roles.

Functional Requirements

- The system shall allow registered users to log in using their credentials.
- The system shall authenticate users before granting access.
- The system shall enforce role-based access control.
- The system shall prevent unauthorized access to restricted modules.
- The system shall allow users to securely log out of the application.

8.2 Dashboard Home

Objective

Provide users with a centralized landing page that offers quick access to key modules, summaries, and dashboard navigation.

Functional Requirements

- Display dashboard summary information.
- Provide navigation to all accessible modules.
- Display role-specific dashboard content.
- Provide quick access to recent activities and announcements.
- Allow users to navigate easily between dashboard modules.

8.3 Data Management

Objective

Enable Data Admins to upload, review, validate, and manage operational data collected from SPPG kitchens.

Functional Requirements

- Upload raw Excel files.
- Validate uploaded file formats.
- Display uploaded file status.
- Allow users to review processed data.
- Allow users to edit data before approval.
- Save validated data to the centralized database.
- Maintain an audit trail of uploaded data.

8.4 AI Processing

Reduce manual effort by automatically extracting, organizing, and structuring uploaded operational data.

Functional Requirements

- Automatically process uploaded Excel files.
- Extract operational information from uploaded datasets.
- Organize extracted data into the required database structure.
- Flag incomplete or invalid data for user review.
- Allow Data Admins to review AI-generated results before import.
- Support reprocessing when required.

8.5 Import Process

Objective

Ensure that only validated information is imported into the production database.

Functional Requirements

- Allow users to approve processed data before import.
- Import validated data into the centralized database.
- Prevent duplicate data imports.
- Generate import status notifications.
- Maintain import history and logs.

8.6 Public Dashboard

Objective

Provide transparent and publicly accessible information regarding the MBG program and participating SPPG kitchens.

Functional Requirements

- Display publicly approved operational information.
- Display menu and nutrition information.
- Display geographical information and SPPG locations.
- Display announcements, documents, and gallery content.
- Support search and filtering where applicable.
- Present information in an intuitive dashboard format.

8.7 Internal Dashboard

Objective

Provide internal stakeholders with operational insights to support monitoring and decision-making.

Functional Requirements

- Display operational performance metrics.
- Display financial and expenditure information.
- Display operational summaries.
- Support filtering and data exploration.
- Provide dashboard visualizations and reports.
- Enable data export where permitted.

8.8 CMS

Objective

Enable administrators to manage the public-facing content displayed on the SPPG Dashboard.

Functional Requirements

- Create new content.
- Edit existing content.
- Delete outdated content.
- Upload gallery images.
- Upload supporting documents.
- Publish approved content.
- Preview content before publishing.

9. Dashboard Requirements

The SPPG Dashboard consists of three primary components: the Public Dashboard, Internal Dashboard, and Backoffice. Each component is designed to meet the specific needs of different user groups while ensuring secure access, consistent data, and an intuitive user experience.

9.1 Public Dashboard

Purpose

The Public Dashboard provides transparent and publicly accessible information about the MBG program and participating SPPG kitchens. It enables citizens and external stakeholders to view approved information without requiring authentication.

Requirements

The Public Dashboard shall:

- Display general information about the MBG program.
- Display SPPG kitchen profiles and locations.
- Display daily or periodic menu information.
- Display nutritional information for meals.
- Display program statistics and key performance indicators.
- Display gallery images and supporting documents.
- Display announcements and public updates.
- Support search and filtering where applicable.
- Present information in a clear, responsive, and user-friendly interface.

9.2 Internal Dashboard

Purpose

The Internal Dashboard provides authorized users with operational insights to monitor the performance of SPPG kitchens and support program management.

Requirements

The Internal Dashboard shall:

- Display operational performance metrics.
- Display meal production and distribution statistics.
- Display financial and expenditure information.
- Display nutritional reporting and summaries.
- Display geographical distribution of SPPG kitchens.
- Support data filtering and drill-down analysis.
- Generate reports and dashboard visualizations.
- Display data using charts, tables, and summary cards.
- Restrict access based on user roles and permissions.

9.3 Backoffice

Purpose

The Backoffice serves as the administrative portal for managing operational data, dashboard content, and user access. It enables administrators to maintain accurate and up-to-date information across the platform.

Requirements

The Backoffice shall:

- Allow Data Admins to upload raw operational data.
- Support AI-assisted processing and validation workflows.
- Allow users to review and approve processed data before publication.
- Manage dashboard content through the CMS.
- Manage gallery images and supporting documents.
- Manage user accounts and role-based permissions.
- Maintain audit logs of administrative activities.
- Synchronize approved data with the Internal and Public Dashboards.

10. Data Model & Data Points

The SPPG Dashboard consolidates data from multiple operational sources into a centralized database. The following sections describe the key data domains managed by the platform and the primary information captured within each domain.

10.1 Menu

Description

Stores information about meals prepared and served by each SPPG kitchen.

Data Points

Data Point	Description
Menu ID	Unique menu identifier
Menu Date	Date the menu is served
Meal Type	Breakfast, Lunch, Snack etc.
Food Items	List of menu items
Portion Size	Standard serving size
Kitchen ID	Associated SPPG kitchen

10.2 Transactions

Description

Captures operational activities and meal distribution records.

Data Points

Data Point	Description
Transaction ID	Unique transaction identifier
Transaction Date	Date of operation
Kitchen ID	Associated SPPG kitchen
Number of Meals	Meals prepared/distribution

Operational Status	Completed, Pending, Cancelled
Remarks	Additional notes

10.3 Nutrition

Description

Stores nutritional information associated with each menu.

Data Points

Data Point	Description
Nutrition ID	Unique nutrition record
Menu ID	Associated menu
Calories	Total Calories
Protein	Protein content
Carbohydrates	Carbohydrate content
Fat	Fat content
Micronutrients	Vitamins and minerals (where applicable)

10.4 Kitchen Information

Description

Maintains master data for all registered SPPG kitchens.

Data Points

Transaction ID	Unique transaction identifier
Transaction Date	Date of operation
Kitchen ID	Associated SPPG kitchen
Number of Meals	Meals prepared/distributed

Operational Status	Completed, Pending, Cancelled
Remarks	Additional notes

10.5 Geographic Information

Description

Stores geographical information used for mapping and regional reporting.

Data Points

Data point	Description
Province	Province name
City/Regency	Administrative region
District	District name
Village	Village name
Latitude	Geographic coordinate
Longitude	Geographic coordinate

10.6 Gallery

Description

Stores media assets displayed on the public dashboard.

Data Points

Data point	Description
Image ID	Unique image identifier
Image Title	Image title
Description	Caption or description
Upload Date	Date uploaded

Uploaded By	User who uploaded
Category	Gallery category

10.7 Documents

Description

Stores documents published through the dashboard.

Data Points

Data point	Description
Document ID	Unique document identifier
Document Title	Title
Category	Document type
Upload Date	Date uploaded
Uploaded By	User who uploaded
File Type	PDF, DOCX, XLSX,etc.

10.8 User Data

Description

Stores information about registered system users and their access rights.

Data point	Description
User ID	Unique user identifier
Full Name	User's full name
Email Address	Login email

User Role	Data Admin, CMS Admin, Internal User
Account Status	Active/ Inactive
Last Login	Last system access

11. Business Rules

The following business rules govern how data is authenticated, processed, validated, managed, and displayed within the SPPG Dashboard. These rules ensure data accuracy, consistency, security, and operational integrity across the platform.

11.1 Authentication Rules

- Only registered users may access the Backoffice and Internal Dashboard.
- Each user shall authenticate using valid login credentials.
- Users shall only access modules and functions permitted by their assigned role.
- User sessions shall automatically expire after a period of inactivity.
- Failed login attempts shall be logged for security monitoring.

11.2 Upload Rules

The following rules shall apply when uploading operational data:

- Only authorized Data Admins may upload operational data.
- Uploaded files shall follow the approved data template and format.
- The system shall verify file completeness before processing.
- Files containing unsupported formats or corrupted data shall be rejected.
- Each upload shall be recorded with the upload date, time, and user information.

11.3 Validation Rules

The following validation rules shall apply before data is approved:

- AI-processed data shall be reviewed before publication.
- Mandatory fields shall be completed before data can be approved.
- Invalid or incomplete records shall be flagged for correction.
- Data may be edited during the validation process.
- Only validated records may proceed to the import process.

11.4 Import Rules

The following rules shall apply during data import:

- Only approved data may be imported into the production database.
- Duplicate records shall not be imported.
- The system shall maintain an import history for audit purposes.
- Imported data shall automatically update the relevant dashboard datasets.
- Failed imports shall generate an error message and preserve the original upload for review.

11.5 Dashboard Visibility Rules

The following visibility rules shall apply:

- Public users shall only view information designated for public release.
- Internal operational data shall only be accessible to authorized users.
- Dashboard content shall display the most recently approved data.
- Users shall only view information permitted by their assigned role.
- Unapproved or draft content shall never be displayed on the Public Dashboard.

11.6 CMS Rules

The following rules shall apply to content management:

- Only authorized CMS Administrators may create, edit, or publish public content.
- Published content shall become visible on the Public Dashboard immediately after publication (or according to the configured publishing schedule).
- Deleted content shall no longer be visible to public users.
- Gallery images and supporting documents shall comply with approved file formats and size limits.
- All CMS activities shall be recorded for audit purposes.

12. Success Metrics (KPIs)

The success of the SPPG Dashboard will be measured through a combination of business, product, and operational Key Performance Indicators (KPIs). These metrics will be used to evaluate the platform's effectiveness in improving data management, operational visibility, and program transparency.

12.1 Business KPIs

KPI	Description	Target
SPPG Coverage	Percentage of registered SPPG kitchens using the dashboard	>90%
Data Reporting Compliance	Percentage of required reports submitted through the platform	>95%
Dashboard Adoption	Percentage of intended internal users actively using the platform	>90%
Public Information Availability	Percentage of approved public information successfully published	100%

12.2 Product KPIs

KPI	Description	Target
Successful File Upload Rate	Percentage of uploads completed successfully	>98%
AI Processing Success Rate	Percentage of uploaded files successfully processed	>95%
Data Validation Accuracy	Percentage of uploaded files successfully processed	>98%
Dashboard Availability	System uptime	>99%
Average Dashboard Response Time	Time taken for dashboard pages to load	<3 seconds

12.3 Operational KPIs

KPI	Description	Target
Data Processing Time	Average time from upload to dashboard publication	<30 minutes
Import Success Rate	Percentage of successful imports	>98%
Data Error Rate	Percentage of records requiring correction	<2%
Dashboard Refresh Frequency	Time between approved data and dashboard update	Real-time / Scheduled refresh
Average Data Validation Time	Time required for Data Admin to review uploaded data	Continuous improvement

13. Non-Functional Requirements

The following non-functional requirements define the expected quality attributes of the SPPG Dashboard. These requirements ensure that the platform remains secure, reliable, accessible, and capable of supporting the operational needs of the MBG program.

13.1 Performance

The system shall:

- Process uploaded data within an acceptable processing time.
- Load dashboard pages within **3 seconds** under normal operating conditions.
- Support multiple concurrent users without significant degradation in performance.
- Efficiently process large datasets submitted by SPPG kitchens.
- Optimize dashboard queries to ensure responsive data visualization.

13.2 Security

The system shall:

- Require authentication for all Backoffice and Internal Dashboard users.
- Enforce role-based access control (RBAC).
- Encrypt user credentials and sensitive information.
- Protect against unauthorized access to operational data.
- Record security-related events such as login attempts and administrative actions.
- Ensure public users cannot access restricted information.

13.3 Availability

The system shall:

- Be available during normal operational hours with minimal downtime.
- Recover gracefully from unexpected system failures.
- Maintain data integrity during interruptions or failures.
- Perform scheduled maintenance with minimal impact on users.
- Support backup and recovery procedures to prevent data loss.

13.4 Accessibility

The system shall:

- Be accessible through modern web browsers.
- Provide a responsive interface for desktop, tablet, and mobile devices.
- Use clear navigation and consistent user interface elements.
- Present dashboard information in an easy-to-understand format.

- Support users with varying levels of technical experience.

13.5 Auditability

The system shall:

- Record all data uploads and imports.
- Maintain an audit trail for data modifications.
- Log CMS content creation, updates, and deletions.
- Record user login activities and administrative actions.
- Allow administrators to review historical system activities for monitoring and compliance purposes.

14. Assumptions & Dependencies

The successful implementation and operation of the SPPG Dashboard depend on several business, technical, and operational assumptions. In addition, the platform relies on external systems, users, and processes to ensure accurate and timely data management.

14.1 Assumptions

The following assumptions have been made during the preparation of this PRD:

- SPPG kitchens will continue to capture operational data using the standardized data templates.
- Operational data submitted by SPPG kitchens is complete, accurate, and submitted within the required reporting timelines.
- Authorized users will be available to review, validate, and approve uploaded data before publication.
- Users have access to a stable internet connection and supported web browsers.
- AI-assisted data processing will improve data preparation but will still require human validation before data is published.
- User roles and permissions will be managed by the system administrator.
- Future enhancements and integrations will be implemented without significantly impacting the existing platform architecture.

14.2 Dependencies

The implementation and operation of the SPPG Dashboard depend on the following:

- Availability of standardized operational data from SPPG kitchens.
- Availability of the AI processing service used for data extraction and structuring.
- Availability of the centralized database for storing operational information.
- Timely validation and approval of uploaded data by authorized users.
- Availability of the CMS for managing public-facing content.
- Stable hosting infrastructure and network connectivity.
- Collaboration between business stakeholders, technical teams, and SPPG administrators throughout implementation and ongoing operations.

15. Out of Scope

The following features and capabilities are outside the scope of the current implementation of the SPPG Dashboard. These items may be considered for future phases or separate initiatives.

- Supply chain and inventory management.
- CCTV monitoring and live video streaming.
- Attendance and workforce management.
- Profit & Loss (P&L) management.
- Integration with external third-party systems (e.g., ERP, accounting, payment systems).
- Mobile application development.
- Predictive analytics and machine learning-based forecasting.
- Automated notifications and workflow approvals.
- Offline data entry and synchronization.
- Advanced reporting and business intelligence features beyond the defined dashboard requirements.

16. Appendix

This appendix provides supporting information, definitions, acronyms, and reference documents used in the preparation of this Product Requirements Document.

16.1 Definitions

Term	Definition
SPPG	<i>Satuan Pelayanan Pemenuhan Gizi</i> – A nutrition fulfillment service unit (kitchen) operating under the MBG program.
Dashboard	A digital interface that presents operational information through charts, tables, and visual reports.
Backoffice	The administrative portal used to manage operational data, users, and dashboard content.
CMS(Content Management System	A module that allows administrators to create, edit, and publish public-facing content.
Data Validation	The process of reviewing uploaded data to ensure accuracy and completeness before publication.
AI Processing	Automated extraction, cleaning, and structuring of uploaded operational data before human validation.

16.2 Acronyms

Acronym	Meaning
MBG	<i>Makan Bergizi Gratis</i>
SPPG	Satuan Pelayanan Pemenuhan Gizi
CMS	Content Management System
PRD	Product Requirements Document
KPI	Key Performance Indicator

AI	Artificial Intelligence
UI	User Interface
UX	User Experience

16.3 References

1. MBG Dashboard Terms of Reference (TOR)
2. SPPG Dashboard User Journey (Miro)
3. MBG Dashboard Functional Requirements
4. MBG Dashboard Data Model
5. Project discussions and stakeholder requirements
6. Related Product Requirements Documents (PRDs), where applicable
